LTSV - Rail Data - Batch List

Key	
Ser	The number series that each batch belongs to. A full list of codes is on the LTSV website. As a guide, the first letter is the type of stock, the second the company or series. For example, CW is GWR Coaches, LT is BR Tops locomotives, WA is BR air-braked wagons etc.
Numbers	The number range used by each batch. A letter r after the numbers indicates that not all numbers in the range were used.
Or	The origins of each batch. Codes are N (New Build), C (Converted), R (Renumbered) or S (Second-hand).
St	The status of each batch. Codes are C (Current, meaning that at least some of the numbers in this batch are still live), D (Defunct, none of the numbers are live) or Z (Cancelled).
Qty	The quantity of numbers in each batch.
Lot	The lot number related to the build/conversion of each batch (where relevant).
Design	The Design Code or Diagram that each batch was built/converted to. Note that some or all of the numbers within the batch may have later been modified to other designs.
Class	The TOPS Class/Code that each batch was built/converted to. Note that some or all of the numbers within the batch may have later been changed to other classes/codes.
Builder	The company or place where each batch was built/converted. Note that for renumbered batches, this will show the place of renumbering (if known), rather than the original build location.
