LTSV - Rail Data - Design List

Key	
Ser	The series that each design/diagram belongs to. A full list of codes is on the LTSV website. As a guide, the first letter indicates the company, the second the type of stock and the third the series. For example, BWD is a BR Wagon (pre-TOPS) Diagram, while BWN is a BR Wagon TOPS Design Code.
Design	The diagram/design code identifier. A number in brackets indicates a re-used code. For example, JG001A (2) was the second use of the design code JG001A.
Description	A description of the type of vehicle, using the official text if available. Note that these may not indicate differences between individual designs. There may be more information in the notes section on the website.
Date on	The date when stock to each design first became live (if known).
Status	The status of each design. Current indicates that some stock to this design is still active. Defunct indicates that all stock has been either withdrawn or changed to a different design.
Date off	The date when the design was no longer current, due to all relevant stock having been either withdrawn or changed.

Ser	Design	Description	Date on	Status	Date off
12615 records, sorted by Design Series and Diagram/Design Number					
BCD	1	Mk.1 Sleeper First (SLF)		Defunct
